

MMC/SD/SDIO slot directly connected to a SPI bus

Required properties:

- compatible : should be "mmc-spi-slot".
- reg : should specify SPI address (chip-select number).
- spi-max-frequency : maximum frequency for this device (Hz).
- voltage-ranges : two cells are required, first cell specifies minimum slot voltage (mV), second cell specifies maximum slot voltage (mV). Several ranges could be specified.
- gpios : (optional) may specify GPIOs in this order: Card-Detect GPIO, Write-Protect GPIO.

Example:

```
mmc-slot@0 {
    compatible = "fsl,mpc8323rdb-mmc-slot",
                 "mmc-spi-slot";
    reg = <0>;
    gpios = <&qe_pio_d 14 1
            &qe_pio_d 15 0>;
    voltage-ranges = <3300 3300>;
    spi-max-frequency = <50000000>;
};
```
