

* Serial

Currently defined compatibles:

- fsl,cpm1-smc-uart
- fsl,cpm2-smc-uart
- fsl,cpm1-scc-uart
- fsl,cpm2-scc-uart
- fsl,qe-uart

Modem control lines connected to GPIO controllers are listed in the `gpios` property as described in `booting-without-of.txt`, section IX.1 in the following order:

CTS, RTS, DCD, DSR, DTR, and RI.

The `gpios` property is optional and can be left out when control lines are not used.

Example:

```
serial@11a00 {
    device_type = "serial";
    compatible = "fsl,mpc8272-scc-uart",
                 "fsl,cpm2-scc-uart";
    reg = <11a00 20 8000 100>;
    interrupts = <28 8>;
    interrupt-parent = <&PIC>;
    fsl,cpm-brg = <1>;
    fsl,cpm-command = <00800000>;
    gpios = <&gpio_c 15 0
            &gpio_d 29 0>;
};
```
