

Generic Block Device Capability

---

This file documents the sysfs file `block/<disk>/capability`

`capability` is a hex word indicating which capabilities a specific disk supports. For more information on bits not listed here, see `include/linux/genhd.h`

Capability	Value
GENHD_FL_MEDIA_CHANGE_NOTIFY	4
When this bit is set, the disk supports Asynchronous Notification of media change events. These events will be broadcast to user space via kernel uevent.
