

sysfs-firmware-sfi..txt

What: /sys/firmware/sfi/tables/

Date: May 2010

Contact: Len Brown <lenb@kernel.org>

Description:

SFI defines a number of small static memory tables so the kernel can get platform information from firmware.

The tables are defined in the latest SFI specification:  
<http://simplefirmware.org/documentation>

While the tables are used by the kernel, user-space can observe them this way:

```
# cd /sys/firmware/sfi/tables
# cat $TABLENAME > $TABLENAME.bin
```
