sysfs-firmware-sgi_uv..txt

What: /sys/firmware/sgi_uv/
Date: August 2008
Contact: Russ Anderson <rja@sgi.com>
Description:

                The /sys/firmware/sgi_uv directory contains information
                about the SGI UV platform.

                Under that directory are a number of files:

                        partition_id
                        coherence_id

                The partition_id entry contains the partition id.
                SGI UV systems can be partitioned into multiple physical
                machines, which each partition running a unique copy
                of the operating system. Each partition will have a unique
                partition id. To display the partition id, use the command:

                        cat /sys/firmware/sgi_uv/partition_id

                The coherence_id entry contains the coherence id.
                A partitioned SGI UV system can have one or more coherence
                domain. The coherence id indicates which coherence domain
                this partition is in. To display the coherence id, use the
                command:

                        cat /sys/firmware/sgi_uv/coherence_id
