Reboot property to control system reboot on PPC4xx systems:

By setting "reset_type" to one of the following values, the default
software reset mechanism may be overidden. Here the possible values of
"reset_type":

        1 - PPC4xx core reset
        2 - PPC4xx chip reset
        3 - PPC4xx system reset (default)

Example:

                cpu@0 {
                        device_type = "cpu";
                        model = "PowerPC,440SPe";
                        ...
                        reset-type = <2>;   /* Use chip-reset */
                };
